

Plastic modular belt conveyor

Conveyor type: **PMB**

The **PMB** plastic modular belt conveyor is a robust all purpose conveyor.

The conveyor can be fitted with a variety of plastic modular belts.

From 1/2" pitch belt that is suitable for knife edge transfers to 2" pitch belts for more heavy duty tasks.

The conveyor is made from all non-corrosive materials to make it fully wash down.

The conveyor has a shaft mounted motor and gearbox for low maintenance and a reliable drive.

To increase safety great care has been taken to remove all pinch points.

The PMB conveyor is fully modular for easy installation and reconfiguring.

The support legs are built-in to the underside of the frame to achieve a smooth surface along the sides of the conveyor. This gives the conveyor increased rigidity and a sleek modern design.

Roller top belt

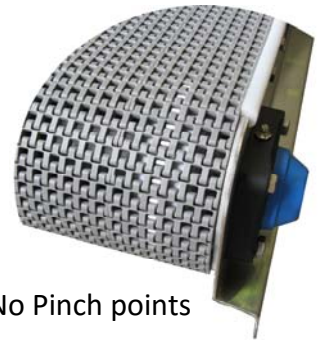

Options

- Adjustable side rails
- Adjustable legs
- Belt lifters for easy cleaning.
- Drive unit splash covers.

Specifications

PMB

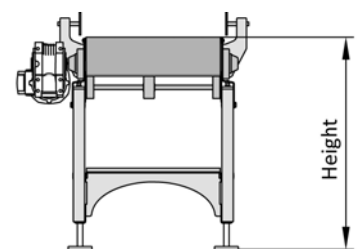

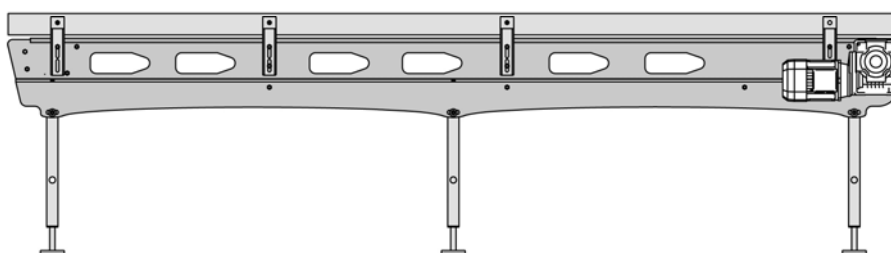

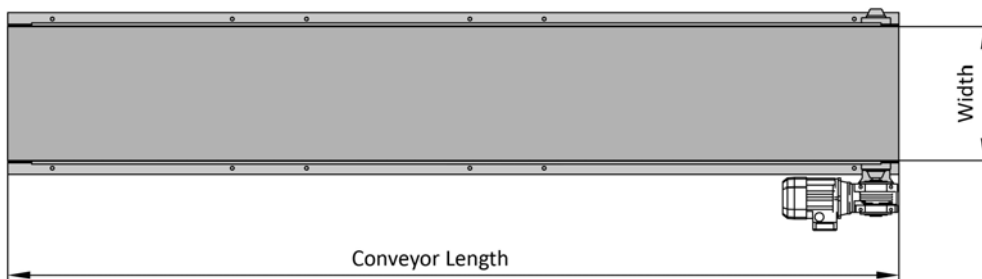

Belt Width	100—2000mm
